Integrity constraints in DBMS in Hindi

integrity constraints ☐ ☐ ☐ ☐ ☐

Integrity constraints are rules that enforce the accuracy and consistency of data in a database. They are used to ensure that the data stored in the database is valid and reliable. Integrity constraints are defined on the columns of a table and can be used to enforce a variety of rules, such as: ensuring that a column contains a unique value, ensuring that a column contains a value from a specific set of values, and ensuring that a column contains a value that is greater than or equal to a specific value. Integrity constraints are enforced by the database management system (DBMS) and can be used to prevent data from being inserted or updated in a way that would violate the rules. Integrity constraints are an important part of database design and are used to ensure that the data stored in the database is accurate and consistent.
